

# DESIGN OF JOURNAL PROGRAM

Name: Natanael da Matta  
Course: CSE210

## DIAGRAM OVERVIEW

# DESCRIPTION

`static void Main(string[] args)`

It will run the program, it will display the main menu in console while interacting with the user and using other classes and functions. Also, in the same function, it will save and load files.

`public void displayJournal()`

It will iterate through the Entry class and print the data stored in `_entries`

`public void displayEntry()`

It will use the data stored in the class attributes in order to print the entry. It will format the entry as {DATE} - Prompt: {PROMPT} {ANSWER}

`public string getPrompt()`

It will use the attribute list `_prompts` and pick a random prompt from the list, to return it.

---

`List<Entry> _entries`

a list taken from Entry class in order to get all entries by user

`_date`

`_prompt`

`_answer`

as the program splits the entries as strings, these attributes will store the DATE, PROMPT and ANSWER

`List<string> _prompts`

it will store all the prompts. The program will pick a random prompt and display it to the user
